#### **DETAILED ACTION**

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 26, 2008 has been entered.

Please note that this application has been assigned to a different examiner.

Claims 1, 15 and 27 have been amended. Claims 1-65 are pending, Claims 1-63, drawn to non-elected inventions as per the restriction requirement of August 8, 2006, are withdrawn.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 64 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lyday (U.S. 6,524,587) as evidenced by Mettler et al (Infection and Immunity, 1982, Vol. 37, pp. 23-27).

Art Unit: 1643

Claim 64 is drawn in part to a method for ablating tumor cells in a subject comprising contacting the tumor cells with a lytic agent in vivo to form a treated tumor having treated tumor cells and applying an vivo stimulus to the tumor, wherein the stimulus is a local body increase in temperature below 42 degrees C.

Lyday discloses a method for treating a solid cancer comprising administering s dengue virus to a patient with said solid cancer, wherein said dengue virus infections maintains the body temperature in excess of 103.5 degrees F (39.72 degrees C) (claim 1). Lyday disclose that healthily non cancerous cells can withstand temperatures up to 41 degrees C. Therefore the disclosure of Lyday is commensurate with a temperature window of 39.72 degrees to 41 degrees which meets the limitations of "below 42 degrees". Lyday discloses that dengue type 2 virus is part of the invention (claim 2). Mettler et al provide evidence that the Dengue type 2 virus is oncolytic (abstract).

All other rejections and objections as set forth or maintained in a prior Office action are withdrawn.

Claim 65 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
